**Subject:** search for 10/817081 cooling date case

This is a date case that was transfered to me from Zach's docket.

Claim 1. An apparams comprising:

a housing cover to cause electrical components on a circuit board to engage with at least one component pad of a heat sink, the housing cover being substantially coextensive with the circuit board;

a projection intemally formed from the housing cover, the projection located on the cover to bias the electrical component against the component pad; and

a mechanism that permits a vertical displacement of the projection relative to the vertical displacement of the housing cover.

Zach suggested 361/704,714,719 165/80.1,80.2,80.3 257/712,713,718,719,726 and 174/252. Is there any other places I should include in my search? Thank you for your help.
